

Hamdi Akoub

Phone: +962796308422 | Email: Akkob9897@gmail.com | [LinkedIn](#) | [Github](#) | Address; Amman, Jordan

Professional Summary:

Results-driven Web Developer with hands-on experience in Python and Django, specializing in building scalable, backend-driven applications and integrating RESTful APIs. Proven track record of developing and launching production systems, including a tax-integrated invoicing platform and multi-branch restaurant management solutions. Strong expertise in SQL, relational database design, and data management, ensuring high performance and data accuracy across business-critical systems. Skilled in designing end-to-end backend workflows, implementing business logic, and supporting ERP and warehouse management system development. Adept at troubleshooting, system optimization, and continuous improvement in live environments. Experienced in frontend template integration using HTML, CSS, and Tailwind, with a solid understanding of system infrastructure, local hosting, and networking fundamentals.

Key Competencies:

Python and Django Development | SQL and Relational Database Management (MySQL, PostgreSQL, SQL Server) | Database Design and Query Optimization | Backend Development (REST APIs, Business Logic, CRUD Systems, Reporting) | Frontend Integration (HTML, CSS, Tailwind) | Web Application Maintenance and UI Support | Systems and Infrastructure (Local Hosting, Networking, Device Connectivity) | Debugging and Troubleshooting | Version Control and Application Maintenance | API Integration and Basic AI Exposure | Python (Pandas, Numpy, Matplotlib) | Docker | GitHub | Version Control (Gitflow/Branching).

Professional Experience:

Web Developer (Python / Django) **Boston Software Developments**

Mar 2025 – Present
Amman, Jordan

Key Achievements:

- Launched Wigopos.com, a full-scale invoicing platform with direct API integration to the Jordanian tax system.
- Engineered end-to-end invoice processing workflows, real-time submission, and retrieval of tax-compliant invoice data.
- Built a restaurant management system deployed across 20+ branches, improving operational efficiency.
- Designed and implemented robust relational database structures, enhancing system performance and data accuracy.
- Contributed to the development of a scalable ERP warehouse management system, focusing on data relationships.

Key Responsibilities:

- Design, develop, and maintain scalable web applications using Python, Django, and SQL-based relational databases.
- Architect and implement backend workflows for API integrations, ensuring seamless data exchange with external systems.
- Develop and optimize core modules including billing systems, agent management, and reporting dashboards.
- Build and manage database schemas, relationships, and queries to ensure data integrity, and reporting accuracy.
- Develop and enhance ERP and warehouse management systems, focusing on scalable architecture.
- Integrate and customize frontend templates within backend-driven applications to improve UI/UX efficiency.
- Support deployment, system maintenance, troubleshooting, and continuous improvement of production applications.

Projects:

Wigopos.com — Invoicing and Tax Integration Platform.

- Developed a production-grade invoicing system using Django and SQL.
- Integrated with Jordanian tax authority APIs for automated invoice submission and response handling.
- Implemented billing, product, agent, and reporting modules to support end-to-end financial operations.

Restaurant Management System.

- Built and deployed a multi-branch operational platform supporting 20+ restaurant locations.
- Enabled workflow automation and centralized management for daily restaurant operations.

ERP Warehouse Management System.

- Contributing to a next-generation ERP solution with complex database architecture.
- Focused on scalability, backend logic optimization, and data relationship modeling.

Customer Service Associate **Amazon**

Jul 2021 – Feb 2024
Amman, Jordan

Key Achievements:

- Consistently achieved high Customer Satisfaction (CSAT) scores and quality assurance ratings.
- Recognized for meeting and exceeding KPIs, including response time, resolution time, and customer experience metrics.
- Successfully managed high-volume workloads while maintaining accuracy and professionalism.
- Contributed to improved team performance through knowledge sharing and process adherence.
